LAZULI IFS · one pointing, every image

0.4–1.7 µm · R ≈ 100–500 · 40 mas spaxels · 3 h

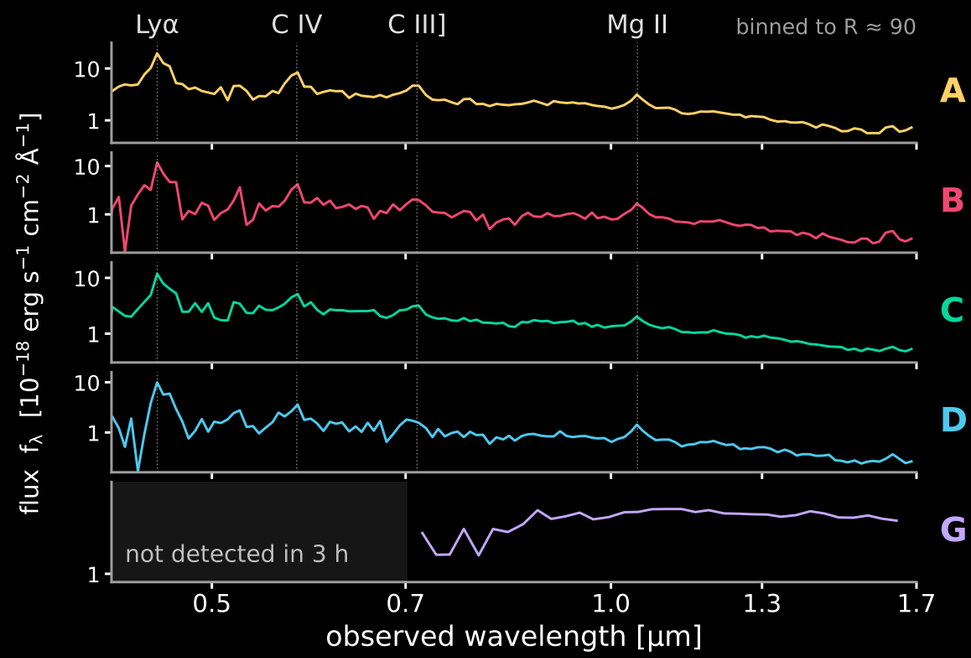

1.20–1.50 µm
lens galaxy: red starlight

0.85–1.00 µm
lens galaxy appears

0.60–0.70 µm
quasar images

Same quasar lines in every image → lensing confirmed

Simulated with SLSim; quasar hosts from HST COSMOS. Lensed-AGN counts: Oguri & Marshall 2010.
Lazuli: Roy et al. 2026 (arXiv:2601.02556). Modelled, not official: diffraction-limited 3.06 m Airy PSF + 4 mas jitter, SDSS-shaped filters, throughput, noise, exposure times.
